

1- You are supposed to write a simple calculator that has a GUI as below. This is a simple calculator that makes the summation, subtraction, multiplication and division.

- Name your components properly
 - Use double as variable
- For formatting you can use `variable.ToString(Format);`

```
//      Format      Result
//      N:          1,054.32
//      N0:          1,054
//      N1:          1,054.3
//      N2:          1,054.32
//      N3:          1,054.322
```

2- You are supposed to write a program that will take number from textbox named as `txtNumber` and write 5 times of the number to the label named `lbResult`. As the user writes a number to `txtNumber` result label will change immediately. In order to do this you will use “`TextChanged`” event. You can check the length of the `txtNumber` by using `txtNumber.Text.Length` property
